Course: Web Technologies

Lab Task 03: E-commerce Product Page

Instruction:

1. Complete the task

2. After completion, push the code in the GitHub repository.

Scenario:

You're building a product page for **Tech Gadgets** Store featuring their latest smartphone. The page should display product details, specifications, and customer reviews.

Steps:

1. Create a folder called ecommerce-product
2. Create product.html file
3. **Structure the product page with:**
 - a. Product name and category breadcrumbs
 - b. Product images section (use placeholder images)
 - c. Product details section (price, description, features)
 - d. Technical specifications table
 - e. Customer reviews section
 - f. "Add to Cart" and "Buy Now" buttons
4. **For technical specifications, create a table with:**
 - a. Rows for display, processor, memory, camera, battery, etc.
5. **In the customer reviews section:**
 - a. Include at least 3 sample reviews
 - b. Use appropriate semantic tags for each review
 - c. Add a "Related Products" section with a grid of similar item
 - d. Include a footer with store policies and contact info
