Course: Web Technologies

Lab Task 04: Blog Website with Multiple Articles

Instruction:

1. Complete the task

2. After completion, push the code in the GitHub repository.

Scenario:

Create a personal blog website where you share your learning journey in web development. The blog should have a homepage listing articles and individual article pages.

Steps:

1. Create a folder called personal blog
2. **Create the following files:**
 - a) index.html (Blog homepage)
 - b) article1.html (First article)
 - c) article2.html (Second article)
 - d) article3.html (Third article)
3. **On the blog homepage:**
 - a) Create a header with blog title and tagline
 - b) Add a navigation menu
 - c) List blog articles with title, excerpt, date, and "Read More" links
 - d) Include an "About the Author" sidebar
4. **For each article page:**
 - a) Article title and publication date
 - b) Author information
 - c) Full article content with headings, paragraphs, and code snippets
 - d) Comments section (static for now)
 - e) "Back to Home" link
5. Create at least 3 different articles on web development topics
6. Use semantic HTML5 elements like <article>, <section>, <aside>, <header>, <footer>
7. Add a subscription form to the sidebar
